

The MSBase Foundation Ltd

Our Mission

The MSBase Foundation's mission is to provide collaborative database tools and research support enabling worldwide collaborative outcomes and epidemiologic research for the benefit of people with Multiple Sclerosis and other Neuroimmunological diseases.

Our Vision

To be the global leader in supporting collaborative real world quality research in Multiple Sclerosis and other Neuroimmunological diseases.

Our Values

The following values drive the organisation's culture and provide a framework for decisions.

Respect

We value the contribution of all MS centre physicians and care teams.

We value the involvement and respect the rights of MS patients.

Collaboration

We facilitate collaborative research projects.

We continually explore opportunities to collaborate with the broader scientific community.

We encourage and support investigator initiated research.

We provide an opportunity for MS physicians to contribute to the scientific leadership of the organisation.

Accountability

We seek permission and consult our investigators about the use of data in global studies and provide them with all findings and reports.

We are transparent in our research and business activities.

We respect the confidentiality of MS patient data and require our investigators to follow all applicable local research ethical requirements.

Quality

We strive to conduct meaningful research and disseminate our findings widely.

We are proactive in recognising new and emerging research opportunities and needs.

We aim to create evidence for better MS management.

We strive to constantly improve the scope and methodology of our data collection.
